# Warnings and environmental policy

## WARNINGS

For your security, and to protect the devices, follow these instructions:

- Do not handle the system with wet or damp hands.
- Disconnect the power supply before making any connections.
- Take care not to cause a short circuit in any of the system connections.

## ENVIRONMENTAL POLICY

Do not dispose of this equipment in the household waste. Electrical and electronic equipment contain substances that may damage the environment if they are not handled appropriately. The symbol of a crossed-out waste bin indicates that electrical equipment should be collected separately from other urban waste. For correct environmental management, it must be taken to the collection centers provided for this purpose, at the end of its useful life.

The equipment's components may be recycled. Act in accordance with current regulations on environmental protection.

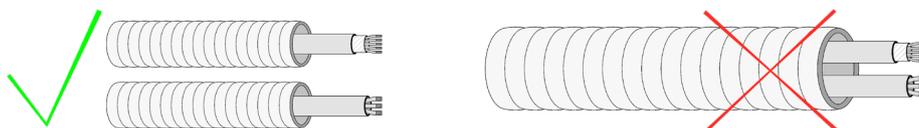

If you replace it with other equipment, you must return it to the distributor or take it to a specialized collection center.

Those breaking the law or by-laws will be subject to such fines and measures as are laid down in environmental protection legislation.

## General requirements

Strictly follow the directions outlined in this manual:

- This system must be installed by a qualified technician.
- Verify that the units to be controlled have been installed according to the manufacturer's requirements and operate correctly before installing the Airzone System.
- Locate and connect all the devices of the installation in accordance with the electronic regulations in force.
- Verify that the air conditioning installation to be controlled is in accordance with the regulations in force.
- Perform all the connections with total absence of power supply.
- Do not place the system bus close to lines of force, fluorescent lights, LED lamps, motors, etc. It might cause interference on the communications.

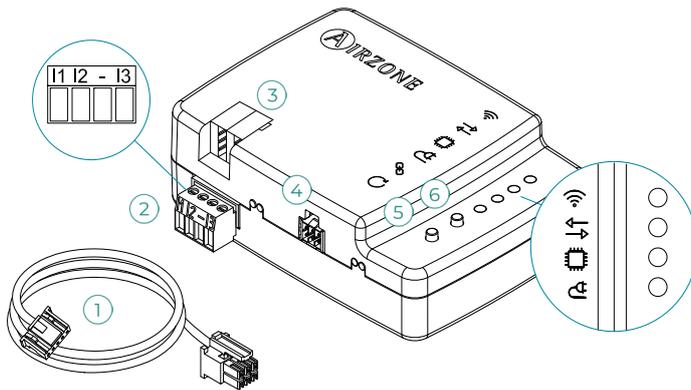

- Respect the connection polarity of each device. A wrong connection may seriously damage the product.

# Introduction

Device to manage and integrate HVAC units in KNX TP-1 control systems. Externally powered by the indoor unit/KNX bus (depending on your unit). Option to program the device via the KNX bus before connecting it to the UI.

Functionalities:

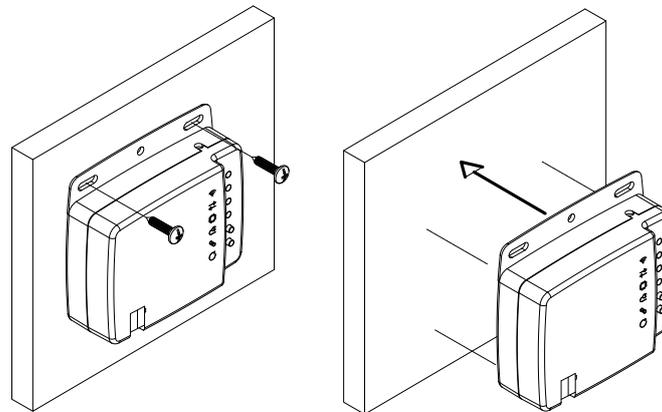

- Control of the parameters of the unit.
- KNX control.
- KNX standard data.
- 3 digital inputs.
- Easily configurable from ETS.
- Communication errors detection.

Meaning	
①	Indoor unit wire
	I1: Digital input 1
	I2: Digital input 2
	-: Common input
	I3: Digital input 3
③	KNX connection
④	Indoor unit port
⑤	Device reboot
⑥	Enable KNX programming

# Assembly

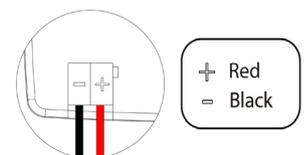

The device can be mounted using screws or double-sided adhesive tape (included with the product).

# Connection

To connect the device to the HVAC unit, follow the instructions on the technical datasheet that comes with the Aidoo.

It has a standard KNX connector for connecting to the KNX bus. Connect the Aidoo to the KNX TP-1 bus, following the color code.

# Configuration

This device is totally compatible with KNX, so you can configure it and set it up through ETS tool. To do this, download the product database at:

[KNX Database](#)

The installation of the database in the ETS tool is carried out following the usual procedure for importing new products.

# Communication objects

The Aidoo KNX device has a series of communication objects available for configuration by default. If you wish to use all the communication objects contained in this device, go to the "Parameters" tab in order to enable them (see the [Configuration parameters](#) section for more information).

**IMPORTANT:** The number of functionalities that can be controlled by the different communication objects offered by the Aidoo KNX device will depend on the particular HVAC unit being controlled.

## DEFAULT COMMUNICATION OBJECTS

By selecting "Direct expansion" as unit type, the default communication objects available in ETS for the Aidoo KNX device are included in "Basic functions" within the control type option. The default temperature unit is Celsius.

<b>Object number</b>	<b>1: Control On/Off</b>	
<b>Description</b>	This allows you to switch the AC unit on or off	
<b>Values</b>	0 → Off	1 → On
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.001 (DPT_Switch)	
<b>Object number</b>	<b>63: Status On/Off</b>	
<b>Description</b>	This shows the status of the AC unit (on or off)	
<b>Values</b>	0 → Off	1 → On
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.001 (DPT_Switch)	
<b>Object number</b>	<b>2: Control operation mode</b>	
<b>Description</b>	This allows you to change the AC unit's operating mode	
<b>Values</b>	0 → Auto 1 → Heat 3 → Cool	9 → Fan 14 → Dry
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	20.105 (DPT_HVACContrMode)	
<b>Object number</b>	<b>64: Status operation mode</b>	
<b>Description</b>	This shows the operating mode of the AC unit	
<b>Values</b>	0 → Auto 1 → Heat 3 → Cool	9 → Fan 14 → Dry
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	20.105 (DPT_HVACContrMode)	
<b>Object number</b>	<b>12: Control fan speed (3 speeds)</b>	
<b>Description</b>	This allows you to change the AC unit's ventilation speed	
<b>Values</b>	0 ... 49 % → Speed 1 50 ... 82 % → Speed 2 83 ... 100 % → Speed 3	1 → Speed 1 2 → Speed 2 3 → Speed 3
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	5.001 (DPT_Scalling)	5.100 (DPT_Enumerated)

**Object number 72: Status fan speed (3 speeds)**

<b>Description</b>	This shows the AC unit's ventilation speed	
<b>Values</b>	33 % → Speed 1 66 % → Speed 2 100 % → Speed 3	1 → Speed 1 2 → Speed 2 3 → Speed 3
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	5.001 (DPT_Scalling)	5.100 (DPT_Enumerated)

*Note: You can configure the object type in the [Fan configuration](#) section, under the "Parameters" tab in ETS. By default it is configured as Datapoint 5.001 (percentage control).*

**Object number 39: Control set point temperature**

<b>Description</b>	This allows you to select the AC unit's set point temperature in increments of 1 °C/°F	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)

**Object number 99: Status set point temperature**

<b>Description</b>	This shows the set point temperature selected for the AC unit	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)

**Object number 330: Status error/alarm**

<b>Description</b>	This shows whether or not an error/alarm has occurred in the indoor unit	
<b>Values</b>	0 → No alarm	1 → Alarm
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.005 (DPT_Alarm)	

**Object number 331: Status error code text**

<b>Description</b>	This shows the text of the error that has occurred in the indoor unit	
<b>Values</b>	ASCII String	
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	16.001 (DPT_String_8859_1)	

**Object number 427: Status temperature units**

<b>Description</b>	This shows the temperature units available in the indoor unit	
<b>Values</b>	0 → Celsius	1 → Fahrenheit
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.002 (DPT_Bool)	

<b>Object number</b>	<b>46: Control rotation function</b>	
<b>Description</b>	This allows you to activate the rotation function	
<b>Values</b>	0 → Disable	1 → Enable
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.003 (DPT_Enable)	
<b>Object number</b>	<b>115: Status rotation function</b>	
<b>Description</b>	This shows whether the rotation function is activated	
<b>Values</b>	0 → Disable	1 → Enable
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.003 (DPT_Enable)	
<b>Object number</b>	<b>47: Control Sleep function</b>	
<b>Description</b>	This allows you to activate the sleep function	
<b>Values</b>	0 → Disable	1 → Enable
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.003 (DPT_Enable)	
<b>Object number</b>	<b>116: Status Sleep function</b>	
<b>Description</b>	This shows whether the sleep function is activated	
<b>Values</b>	0 → Disable	1 → Enable
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.003 (DPT_Enable)	
<b>Object number</b>	<b>48: Control auto restart function</b>	
<b>Description</b>	This allows you to activate the auto restart function	
<b>Values</b>	0 → Disable	1 → Enable
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.003 (DPT_Enable)	
<b>Object number</b>	<b>117: Status auto restart function</b>	
<b>Description</b>	This shows whether the auto restart function is activated	
<b>Values</b>	0 → Disable	1 → Enable
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.003 (DPT_Enable)	
<b>Object number</b>	<b>49: Control dehumitification function</b>	
<b>Description</b>	This allows you to activate the dehumitification function	
<b>Values</b>	0 → Disable	1 → Enable
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.003 (DPT_Enable)	
<b>Object number</b>	<b>118: Status dehumitification function</b>	
<b>Description</b>	This shows whether the dehumitification function is activated	
<b>Values</b>	0 → Disable	1 → Enable
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.003 (DPT_Enable)	
<b>Object number</b>	<b>50: Control defrost function</b>	
<b>Description</b>	This allows you to activate the defrost function	
<b>Values</b>	0 → Disable	1 → Enable
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.003 (DPT_Enable)	

<b>Object number</b>	<b>121: Status defrost function</b>	
<b>Description</b>	This shows whether the defrost function is activated	
<b>Values</b>	0 → Disable	1 → Enable
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.003 (DPT_Enable)	
<b>Object number</b>	<b>51: Control Powerful function</b>	
<b>Description</b>	This allows you to activate the powerful function	
<b>Values</b>	0 → Disable	1 → Enable
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.003 (DPT_Enable)	
<b>Object number</b>	<b>127: Status Powerful function</b>	
<b>Description</b>	This shows whether the powerful function is activated	
<b>Values</b>	0 → Disable	1 → Enable
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.003 (DPT_Enable)	
<b>Object number</b>	<b>52: Control confort function</b>	
<b>Description</b>	This allows you to activate the confort function	
<b>Values</b>	0 → Disable	1 → Enable
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.003 (DPT_Enable)	
<b>Object number</b>	<b>128: Status confort function</b>	
<b>Description</b>	This shows whether the confort function is activated	
<b>Values</b>	0 → Disable	1 → Enable
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.003 (DPT_Enable)	
<b>Object number</b>	<b>53: Control Eco/Health function</b>	
<b>Description</b>	This allows you to activate the eco/health function	
<b>Values</b>	0 → Disable	1 → Enable
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.003 (DPT_Enable)	
<b>Object number</b>	<b>129: Status Eco/Health function</b>	
<b>Description</b>	This shows whether the eco/health function is activated	
<b>Values</b>	0 → Disable	1 → Enable
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.003 (DPT_Enable)	
<b>Object number</b>	<b>54: Control economy function</b>	
<b>Description</b>	This allows you to activate the economy function	
<b>Values</b>	0 → Disable	1 → Enable
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.003 (DPT_Enable)	
<b>Object number</b>	<b>130: Status economy function</b>	
<b>Description</b>	This shows whether the economy function is activated	
<b>Values</b>	0 → Disable	1 → Enable
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.003 (DPT_Enable)	

**Object number 55: Control antifungus function****Description** This allows you to activate the antifungus function**Values** 0 → Disable 1 → Enable**Type of access to the bus** Write**Datapoint identification** 1.003 (DPT\_Enable)**Object number 131: Status antifungus function****Description** This shows whether the antifungus function is activated**Values** 0 → Disable 1 → Enable**Type of access to the bus** Reading**Datapoint identification** 1.003 (DPT\_Enable)**Object number 56: Control cleaning function****Description** This allows you to activate the cleaning function**Values** 0 → Disable 1 → Enable**Type of access to the bus** Write**Datapoint identification** 1.003 (DPT\_Enable)**Object number 132: Status cleaning function****Description** This shows whether the cleaning function is activated**Values** 0 → Disable 1 → Enable**Type of access to the bus** Reading**Datapoint identification** 1.003 (DPT\_Enable)**Object number 57: Control silence function****Description** This allows you to activate the silence function**Values** 0 → Disable 1 → Enable**Type of access to the bus** Write**Datapoint identification** 1.003 (DPT\_Enable)**Object number 133: Status silence function****Description** This shows whether the silence function is activated**Values** 0 → Disable 1 → Enable**Type of access to the bus** Reading**Datapoint identification** 1.003 (DPT\_Enable)**Object number 58: Control test function****Description** This allows you to activate the test function**Values** 0 → Disable 1 → Enable**Type of access to the bus** Write**Datapoint identification** 1.003 (DPT\_Enable)**Object number 135: Status test function****Description** This shows whether the test function is activated**Values** 0 → Disable 1 → Enable**Type of access to the bus** Reading**Datapoint identification** 1.003 (DPT\_Enable)**Object number 59: Control vacation function****Description** This allows you to activate the vacation mode function**Values** 0 → Disable 1 → Enable**Type of access to the bus** Write**Datapoint identification** 1.003 (DPT\_Enable)

<b>Object number</b>	<b>137: Status vacation function</b>	
<b>Description</b>	This shows whether the vacation mode function is activated	
<b>Values</b>	0 → Disable	1 → Enable
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.003 (DPT_Enable)	
<b>Object number</b>	<b>60: Control electric heating function</b>	
<b>Description</b>	This allows you to activate the electric heating function	
<b>Values</b>	0 → Disable	1 → Enable
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.003 (DPT_Enable)	
<b>Object number</b>	<b>138: Status electric heating function</b>	
<b>Description</b>	This shows whether the electric heating function is activated	
<b>Values</b>	0 → Disable	1 → Enable
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.003 (DPT_Enable)	
<b>Object number</b>	<b>61: Control night function</b>	
<b>Description</b>	This allows you to activate the night mode function	
<b>Values</b>	0 → Disable	1 → Enable
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.003 (DPT_Enable)	
<b>Object number</b>	<b>141: Status night function</b>	
<b>Description</b>	This shows whether the night mode function is activated	
<b>Values</b>	0 → Disable	1 → Enable
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.003 (DPT_Enable)	
<b>Object number</b>	<b>62: Control leak detection reset</b>	
<b>Description</b>	Allows you to reset the leak detection sensor	
<b>Values</b>	1 → Reset	
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.015 (DPT_Reset)	
<b>Object number</b>	<b>142: Status leak detection reset</b>	
<b>Description</b>	This shows whether the leak detection sensor has been reset	
<b>Values</b>	0 → No alarm	1 → Alarm
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.002 (DPT_Bool)	
<b>Object number</b>	<b>119: Status central lock</b>	
<b>Description</b>	This shows whether the centralized control has been locked	
<b>Values</b>	0 → Disable	1 → Enable
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.003 (DPT_Enable)	
<b>Object number</b>	<b>120: Status defrost warning</b>	
<b>Description</b>	This shows whether the defrost warning has been detected	
<b>Values</b>	0 → Disable	1 → Enable
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.003 (DPT_Enable)	

<b>Object number</b>	<b>122: Status product type</b>	
<b>Description</b>	This shows the type of AC unit in your system	
<b>Values</b>	ASCII String	
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	16.001 (DPT_String_8859_1)	
<b>Object number</b>	<b>123: Status indoor unit address</b>	
<b>Description</b>	This shows the address of the AC unit	
<b>Values</b>	0 ... 655335	
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	7.001 (DPT_Value_2_Ucount)	
<b>Object number</b>	<b>124: Status indoor unit model</b>	
<b>Description</b>	This shows the model of the AC unit	
<b>Values</b>	ASCII String	
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	16.001 (DPT_String_8859_1)	
<b>Object number</b>	<b>125: Status indoor unit capacity</b>	
<b>Description</b>	This shows the capacity of the AC unit	
<b>Values</b>	0 ... 655335	
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	7.001 (DPT_Value_2_Ucount)	
<b>Object number</b>	<b>126: Status outdoor unit On/Off</b>	
<b>Description</b>	This shows the status of the outdoor unit (on or off)	
<b>Values</b>	0 → Off	1 → On
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.001 (DPT_Switch)	
<b>Object number</b>	<b>134: Status human detection</b>	
<b>Description</b>	This shows whether the occupancy detection function has been activated	
<b>Values</b>	0 → Disable	1 → Enable
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.003 (DPT_Enable)	
<b>Object number</b>	<b>136: Status fresh air valve</b>	
<b>Description</b>	This shows whether the fresh air valve is open	
<b>Values</b>	0 → Disable	1 → Enable
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.003 (DPT_Enable)	
<b>Object number</b>	<b>139: Status static pressure</b>	
<b>Description</b>	This shows the static pressure value	
<b>Values</b>	0 ... 655335	
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	7.001 (DPT_Value_2_Ucount)	
<b>Object number</b>	<b>140: Status preheating function</b>	
<b>Description</b>	This shows whether the preheating function is on	
<b>Values</b>	0 → Off	1 → On
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.001 (DPT_Switch)	

<b>Object number</b>	<b>143: Status central controller</b>
<b>Description</b>	This shows whether the centralized control has detected any presence
<b>Values</b>	0 → No present 1 → Present
<b>Type of access to the bus</b>	Reading
<b>Datapoint identification</b>	1.002 (DPT_Bool)
<b>Object number</b>	<b>144: Status On operation lock</b>
<b>Description</b>	This shows whether the AC unit's locking is activated
<b>Values</b>	1 → Blocked
<b>Type of access to the bus</b>	Reading
<b>Datapoint identification</b>	1.002 (DPT_Bool)
<b>Object number</b>	<b>145: Status Off operation lock</b>
<b>Description</b>	This shows whether the AC unit's locking is deactivated
<b>Values</b>	1 → Blocked
<b>Type of access to the bus</b>	Reading
<b>Datapoint identification</b>	1.002 (DPT_Bool)
<b>Object number</b>	<b>146: Status mode lock</b>
<b>Description</b>	This shows whether the operation mode has been locked
<b>Values</b>	1 → Blocked
<b>Type of access to the bus</b>	Reading
<b>Datapoint identification</b>	1.002 (DPT_Bool)
<b>Object number</b>	<b>147: Status set point lock</b>
<b>Description</b>	This shows whether the set point temperature has been locked
<b>Values</b>	1 → Blocked
<b>Type of access to the bus</b>	Reading
<b>Datapoint identification</b>	1.002 (DPT_Bool)
<b>Object number</b>	<b>148: Status fan speed lock</b>
<b>Description</b>	This shows whether the fan speed has been locked
<b>Values</b>	1 → Blocked
<b>Type of access to the bus</b>	Reading
<b>Datapoint identification</b>	1.002 (DPT_Bool)
<b>Object number</b>	<b>149: Status slats operation lock</b>
<b>Description</b>	This shows whether slats have been locked
<b>Values</b>	1 → Blocked
<b>Type of access to the bus</b>	Reading
<b>Datapoint identification</b>	1.002 (DPT_Bool)

- Working conditions monitoring

<b>Object number</b>	<b>332: Status return temperature</b>	
<b>Description</b>	This shows the return temperature of the indoor unit	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)
<b>Object number</b>	<b>333: Status internal probe temperature</b>	
<b>Description</b>	This shows the temperature measured by the indoor unit's thermostat probe	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)
<b>Object number</b>	<b>334: Status external probe temperature</b>	
<b>Description</b>	This shows the temperature measured by the outdoor unit's probe	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)
<b>Object number</b>	<b>335: Status working temperature</b>	
<b>Description</b>	This shows the working temperature of the indoor unit	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)
<b>Object number</b>	<b>336: Status operating hours counter</b>	
<b>Description</b>	This shows the indoor unit's number of operating hours	
<b>Values</b>	Number of operating hours	
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	13.100 (DPT_Value_2_Ucount)	
<b>Object number</b>	<b>337: Status indoor unit exchange heating temperature</b>	
<b>Description</b>	This shows the heat exchanger temperature of the indoor unit	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)
<b>Object number</b>	<b>338: Status outdoor unit exchange heating temperature</b>	
<b>Description</b>	This shows the heat exchanger temperature of the outdoor unit	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)
<b>Object number</b>	<b>339: Status pump flowrate</b>	
<b>Description</b>	This shows the volume of fluid flowing through the pump	
<b>Values</b>	l/h	
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.025 (DPT_Value_Volume_Flow)	

<b>Object number</b>	<b>340: Status inlet water temperature</b>	
<b>Description</b>	This shows the inlet water temperature	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)
<b>Object number</b>	<b>341: Status outlet water temperature</b>	
<b>Description</b>	This shows the outlet water temperature	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)
<b>Object number</b>	<b>342: Status buffer tank water temperature</b>	
<b>Description</b>	This shows the temperature of the domestic hot water (DHW)	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)
<b>Object number</b>	<b>343: Status solar water temperature</b>	
<b>Description</b>	This shows the water temperature of the solar panels	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)
<b>Object number</b>	<b>344: Status pool water temperature</b>	
<b>Description</b>	This shows the pool water temperature	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)
<b>Object number</b>	<b>345: Status compressor discharge temperature</b>	
<b>Description</b>	This shows the compressor discharge temperature	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)
<b>Object number</b>	<b>346: Status indoor piping temperature</b>	
<b>Description</b>	This shows the temperature of the indoor unit's gas piping	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)
<b>Object number</b>	<b>347: Status outdoor piping temperature</b>	
<b>Description</b>	This shows the temperature of the outdoor unit's gas piping	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)
<b>Object number</b>	<b>348: Status evaporation outlet temperature</b>	
<b>Description</b>	This shows the evaporation outlet temperature of the outdoor unit	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)

<b>Object number</b>	<b>349: Status IPM temperature</b>	
<b>Description</b>	This shows the PHE water supply temperature	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)
<b>Object number</b>	<b>350: Status high pressure</b>	
<b>Description</b>	This shows the condensation pressure value	
<b>Values</b>	Pa	
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	14.058 (DPT_Value_Pressure)	
<b>Object number</b>	<b>351: Status low pressure</b>	
<b>Description</b>	This shows the evaporation pressure value	
<b>Values</b>	Pa	
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	14.058 (DPT_Value_Pressure)	
<b>Object number</b>	<b>352: Status outdoor unit current</b>	
<b>Description</b>	This shows the compressor's consumption	
<b>Values</b>	A	
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	14.019 (DPT_Value_Electric_Current)	
<b>Object number</b>	<b>353: Status compressor frequency</b>	
<b>Description</b>	This shows the compressor frequency	
<b>Values</b>	Hz	
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	14.033 (DPT_Value_Frequency)	
<b>Object number</b>	<b>354: Status indoor unit expansion valve</b>	
<b>Description</b>	This shows the status of the indoor unit expansion valve	
<b>Values</b>	Pulses	
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	7.001 (DPT_Value_2_Ucount)	
<b>Object number</b>	<b>355: Status outdoor unit expansion valve</b>	
<b>Description</b>	This shows the status of the outdoor unit expansion valve	
<b>Values</b>	Pulses	
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	7.001 (DPT_Value_2_Ucount)	
<b>Object number</b>	<b>356: Status 4 ways valve</b>	
<b>Description</b>	This shows the position of the 4-way valve	
<b>Values</b>	Pulses	
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	7.001 (DPT_Value_2_Ucount)	
<b>Object number</b>	<b>357: Status 3 ways valve</b>	
<b>Description</b>	This shows the position of the 3-way valve	
<b>Values</b>	Pulses	
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	7.001 (DPT_Value_2_Ucount)	

<b>Object number</b>	<b>358: Status 2 ways valve</b>	
<b>Description</b>	This shows the position of the 2-way valve	
<b>Values</b>	Pulses	
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	7.001 (DPT_Value_2_Ucount)	
<b>Object number</b>	<b>359: Status refrigerant temperature</b>	
<b>Description</b>	This shows the temperature of the indoor unit's refrigerant	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)
<b>Object number</b>	<b>360: Status water flow</b>	
<b>Description</b>	This shows the volume of water flowing through the circuit	
<b>Values</b>	l/h	
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.025 (DPT_Value_Volume_Flow)	
<b>Object number</b>	<b>361: Status water pressure</b>	
<b>Description</b>	This shows the circuit's pressure value	
<b>Values</b>	Pa	
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	14.058 (DPT_Value_Pressure)	
<b>Object number</b>	<b>362: Status ambient temperature C2</b>	
<b>Description</b>	This shows the ambient temperature of circuit 2	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)
<b>Object number</b>	<b>363: Status outlet water temperature C2</b>	
<b>Description</b>	This shows the outlet water temperature of circuit 2	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)
<b>Object number</b>	<b>364: Status relative humidity</b>	
<b>Description</b>	This shows the % humidity in the room	
<b>Values</b>	%	
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.007 (DPT_Value_Humidity)	
• Energy monitoring		
<b>Object number</b>	<b>365: Status total heating energy production</b>	
<b>Description</b>	This shows the total energy generated in heating mode	
<b>Values</b>	kWh	
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	13.013 (DPT_ActiveEnergy_kWh)	
<b>Object number</b>	<b>366: Status current heating energy production</b>	
<b>Description</b>	This shows the current energy generated in heating mode	
<b>Values</b>	kW	
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.024 (DPT_Power)	

<b>Object number</b>	<b>367: Status total cooling energy production</b>
<b>Description</b>	This shows the total energy generated in cooling mode
<b>Values</b>	kWh
<b>Type of access to the bus</b>	Reading
<b>Datapoint identification</b>	13.013 (DPT_ActiveEnergy_kWh)
<b>Object number</b>	<b>368: Status current cooling energy production</b>
<b>Description</b>	This shows the current energy generated in cooling mode
<b>Values</b>	kW
<b>Type of access to the bus</b>	Reading
<b>Datapoint identification</b>	9.024 (DPT_Power)
<b>Object number</b>	<b>369: Status total DHW energy production</b>
<b>Description</b>	This shows the total energy generated in DHW mode
<b>Values</b>	kWh
<b>Type of access to the bus</b>	Reading
<b>Datapoint identification</b>	13.013 (DPT_ActiveEnergy_kWh)
<b>Object number</b>	<b>370: Status current DHW energy production</b>
<b>Description</b>	This shows the current energy generated in DHW mode
<b>Values</b>	kW
<b>Type of access to the bus</b>	Reading
<b>Datapoint identification</b>	9.024 (DPT_Power)
<b>Object number</b>	<b>371: Status current photovoltaic energy production</b>
<b>Description</b>	This shows the current photovoltaic energy generated
<b>Values</b>	kW
<b>Type of access to the bus</b>	Reading
<b>Datapoint identification</b>	9.024 (DPT_Power)
<b>Object number</b>	<b>372: Status total energy produced</b>
<b>Description</b>	This shows the total energy generated by the system
<b>Values</b>	kWh
<b>Type of access to the bus</b>	Reading
<b>Datapoint identification</b>	13.013 (DPT_ActiveEnergy_kWh)
<b>Object number</b>	<b>373: Status heatpump total energy consumption</b>
<b>Description</b>	This shows the total energy consumed by the heat pump
<b>Values</b>	kWh
<b>Type of access to the bus</b>	Reading
<b>Datapoint identification</b>	13.013 (DPT_ActiveEnergy_kWh)
<b>Object number</b>	<b>374: Status heatpump current energy consumption</b>
<b>Description</b>	This shows the current energy consumed by the heat pump
<b>Values</b>	kW
<b>Type of access to the bus</b>	Reading
<b>Datapoint identification</b>	9.024 (DPT_Power)
<b>Object number</b>	<b>375: Status building current energy consumption</b>
<b>Description</b>	This shows the total energy consumed by the system
<b>Values</b>	kW
<b>Type of access to the bus</b>	Reading
<b>Datapoint identification</b>	9.024 (DPT_Power)

**Object number 376: Status electric heat resistor total energy consumption**

**Description** This shows the total energy consumed by the heating resistor

**Values** kWh

**Type of access to the bus** Reading

**Datapoint identification** 13.013 (DPT\_ActiveEnergy\_kWh)

**Object number 377: Status DHW electric resistor total energy consumption**

**Description** This shows the total energy consumed by the DHW resistor

**Values** kWh

**Type of access to the bus** Reading

**Datapoint identification** 13.013 (DPT\_ActiveEnergy\_kWh)

**Object number 378: Status heating compressor total energy consumption**

**Description** This shows the energy consumed by the compressor in heating mode

**Values** kWh

**Type of access to the bus** Reading

**Datapoint identification** 13.013 (DPT\_ActiveEnergy\_kWh)

**Object number 379: Status cooling compressor total energy consumption**

**Description** This shows the energy consumed by the compressor in cooling mode

**Values** kWh

**Type of access to the bus** Reading

**Datapoint identification** 13.013 (DPT\_ActiveEnergy\_kWh)

**Object number 380: Status DHW compressor total energy consumption**

**Description** This shows the energy consumed by the compressor in DHW mode

**Values** kWh

**Type of access to the bus** Reading

**Datapoint identification** 13.013 (DPT\_ActiveEnergy\_kWh)

**Object number 381: Status total energy consumption**

**Description** This shows the total energy consumed by the system

**Values** kWh

**Type of access to the bus** Reading

**Datapoint identification** 13.013 (DPT\_ActiveEnergy\_kWh)

- Enable the use of manufacturer ID selection objects

**Object number 384: Control manufacturer ID**

**Description** This allows you to select the ID of the indoor unit's manufacturer

**Values** 2 byte unsigned value

**Type of access to the bus** Write

**Datapoint identification** 7.001 (DPT\_Value\_2\_Ucount)

**Object number 387: Status manufacturer ID**

**Description** This shows the ID of the indoor unit's manufacturer

**Values** 2 byte unsigned value

**Type of access to the bus** Reading

**Datapoint identification** 7.001 (DPT\_Value\_2\_Ucount)

- Enable use of remote control lock objects. If you select Yes, it allows you to select the unit's parameters that you want to lock.

- ◆ Lock On/Off changes
- ◆ Lock mode changes
- ◆ Lock fan speed changes
- ◆ Lock set point temperature changes

<b>Object number</b>	<b>382: Control lock KNX control objects</b>	
<b>Description</b>	This allows you to lock control of KNX communication objects	
<b>Values</b>	0 → Unlocked	1 → Locked
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.002 (DPT_Bool)	
<b>Object number</b>	<b>385: Status KNX control objects lock</b>	
<b>Description</b>	This shows whether control of KNX communication objects has been locked	
<b>Values</b>	0 → Unlocked	1 → Locked
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.002 (DPT_Bool)	
<b>Object number</b>	<b>383: Control remote controller lock</b>	
<b>Description</b>	This allows you to lock control from the indoor unit's controller	
<b>Values</b>	0 → Unlocked	1 → Locked
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.002 (DPT_Bool)	
<b>Object number</b>	<b>386: Status remote controller lock</b>	
<b>Description</b>	This shows whether the indoor unit's controller has been locked	
<b>Values</b>	0 → Unlocked	1 → Locked
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.002 (DPT_Bool)	

- Enable use of objects for filter

<b>Object number</b>	<b>43: Control reset filter alarm</b>	
<b>Description</b>	This resets the filter cleaning warning counter on the AC unit	
<b>Values</b>	1 → Reset filter	
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.015 (DPT_Reset)	
<b>Object number</b>	<b>112: Status reset filter alarm</b>	
<b>Description</b>	This shows whether or not a filter cleaning warning has occurred in the AC unit	
<b>Values</b>	0 → No alarm	1 → Alarm
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.002 (DPT_Bool)	

## Mode configuration

- Enable “Mode cool/heat” objects

<b>Object number</b>	<b>3: Control operation mode Cool/Heat</b>	
<b>Description</b>	This allows you to select the AC unit's operation mode (cooling or heating)	
<b>Values</b>	0 → Cool	1 → Heat

<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.100 (DPT_Heat/Cool)	

<b>Object number</b>	<b>65: Status operation mode Cool/Heat</b>	
<b>Description</b>	This shows the operation mode selected for the AC unit	
<b>Values</b>	0 → Cool	1 → Heat

<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.100 (DPT_Heat/Cool)	

- Enable PID-Compat scaling mode objects

<b>Object number</b>	<b>4: Control operation mode Cool + On</b>	
<b>Description</b>	This allows you to switch the AC unit on or off, with the selected operation mode being cooling	
<b>Values</b>	0 % → Off	1 ... 100 % → On + Cool

<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	5.001 (DPT_Scaling)	

<b>Object number</b>	<b>5: Control operation mode Heat + On</b>	
<b>Description</b>	This allows you to switch the AC unit on or off, with the selected operation mode being heating	
<b>Values</b>	0 % → Off	1 ... 100 % → On + Heat

<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	5.001 (DPT_Scaling)	

- Enable use of bit-type mode objects

<b>Object number</b>	<b>6: Control operation mode Auto</b>	
<b>Description</b>	This allows you to select auto mode as the AC unit's operation mode	
<b>Values</b>	1 → Auto	

<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.002 (DPT_Bool)	

<b>Object number</b>	<b>66: Status operation mode Auto</b>	
<b>Description</b>	This shows that the operation mode currently selected for the AC unit is auto mode	
<b>Values</b>	1 → Auto	

<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.002 (DPT_Bool)	

<b>Object number</b>	<b>7: Control operation mode Heat</b>	
<b>Description</b>	This allows you to select heating mode as the AC unit's operation mode	
<b>Values</b>	1 → Heat	

<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.002 (DPT_Bool)	

<b>Object number</b>	<b>67: Status operation mode Heat</b>	
<b>Description</b>	This shows that the operation mode currently selected for the AC unit is heating mode	
<b>Values</b>	1 → Heat	

<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.002 (DPT_Bool)	

**Object number 8: Control operation mode Cool****Description** This allows you to select cooling mode as the AC unit's operation mode**Values** 1 → Cool**Type of access to the bus** Write**Datapoint identification** 1.002 (DPT\_Bool)**Object number 68: Status operation mode Cool****Description** This shows that the operation mode currently selected for the AC unit is cooling mode**Values** 1 → Cool**Type of access to the bus** Reading**Datapoint identification** 1.002 (DPT\_Bool)**Object number 9: Control operation mode Ventilation****Description** This allows you to select ventilation mode as the AC unit's operation mode**Values** 1 → Fan**Type of access to the bus** Write**Datapoint identification** 1.002 (DPT\_Bool)**Object number 69: Status operation mode Ventilation****Description** This shows that the operation mode currently selected for the AC unit is ventilation mode**Values** 1 → Fan**Type of access to the bus** Reading**Datapoint identification** 1.002 (DPT\_Bool)**Object number 10: Control operation mode Dry****Description** This allows you to select dry mode as the AC unit's operation mode**Values** 1 → Dry**Type of access to the bus** Write**Datapoint identification** 1.002 (DPT\_Bool)**Object number 70: Status operation mode Dry****Description** This shows that the operation mode currently selected for the AC unit is dry mode**Values** 1 → Dry**Type of access to the bus** Reading**Datapoint identification** 1.002 (DPT\_Bool)

- Enable use of +/- object for mode

Select the DPT that you want to use: DPT 1.007 (Step) or DPT 1.008 (Up/Down).

**Object number 11: Control operation mode +/-****Description** This allows you to change the AC unit's operation mode**Values** 0 → Decrease  
1 → Increase  
0 → Up  
1 → Down**Type of access to the bus** Write**Datapoint identification** 1.007 (DPT\_Step) 1.008 (DPT\_UpDown)

- Enable use of text object for mode

**Object number 71: Status operation mode text****Description** This shows the AC unit's operation mode**Values** ASCII String**Type of access to the bus** Reading**Datapoint identification** 16.001 (DPT\_String\_8859\_1)

## Fan configuration

- Enable use of 3 speed control

Select the fan speeds you want to control (3 or N). 3 speeds are controlled by default (communication objects 12 and 72). If you select “Control up to N speeds”, communication objects 12 and 72 will be replaced by 13 and 73, respectively.

<b>Object number</b>	<b>13: Control fan speed (N speeds)</b>
<b>Description</b>	This allows you to change the AC unit's fan speed
<b>Values</b>	0 ... 100 % → Speed 1 to Speed N
<b>Type of access to the bus</b>	Write
<b>Datapoint identification</b>	5.001 (DPT_Scalling)
<b>Object number</b>	<b>73: Status fan speed (N speeds)</b>
<b>Description</b>	This shows the AC unit's fan speed
<b>Values</b>	0 ... 100 % → Speed 1 to Speed N
<b>Type of access to the bus</b>	Reading
<b>Datapoint identification</b>	5.001 (DPT_Scalling)

- DPT object type for fan speed (control up to 3 speeds)

Select whether you want to use Datapoint DPT 5.001 (percentage control (Scaling)) or DPT 5.100 (number control (Fan stage)) to control and read the AC unit's fan speed status:

5.001 (DPT_Scalling)	5.100 (DPT_Enumerated)
0 ... 49 % → Speed 1	1 → Speed 1
50 ... 82 % → Speed 2	2 → Speed 2
83 ... 100 % → Speed 3	3 → Speed 3

- Enable use of bit-type fan speed objects

<b>Object number</b>	<b>14: Control fan speed (Auto)</b>
<b>Description</b>	This allows you to switch the AC unit's ventilation mode between manual and auto
<b>Values</b>	0 → Manual 1 → Auto
<b>Type of access to the bus</b>	Write
<b>Datapoint identification</b>	1.002 (DPT_Bool)
<b>Object number</b>	<b>74: Status fan speed (Auto)</b>
<b>Description</b>	This shows whether the AC unit's fan speed is set to manual or auto
<b>Values</b>	0 → Manual 1 → Auto
<b>Type of access to the bus</b>	Reading
<b>Datapoint identification</b>	1.002 (DPT_Bool)
<b>Object number</b>	<b>15: Control fan speed 1</b>
<b>Description</b>	This allows you to activate fan speed 1 on the AC unit
<b>Values</b>	1 → Set fan speed 1
<b>Type of access to the bus</b>	Write
<b>Datapoint identification</b>	1.002 (DPT_Bool)
<b>Object number</b>	<b>75: Status fan speed (speed 1)</b>
<b>Description</b>	This shows whether the AC unit's fan speed is set to 1
<b>Values</b>	1 → Fan is in speed 1
<b>Type of access to the bus</b>	Reading
<b>Datapoint identification</b>	1.002 (DPT_Bool)

**Object number 16: Control fan speed 2****Description** This allows you to activate fan speed 2 on the AC unit**Values** 1 → Set fan speed 2**Type of access to the bus** Write**Datapoint identification** 1.002 (DPT\_Bool)**Object number 76: Status fan speed (speed 2)****Description** This shows whether the AC unit's fan speed is set to 2**Values** 1 → Fan is in speed 2**Type of access to the bus** Reading**Datapoint identification** 1.002 (DPT\_Bool)**Object number 17: Control fan speed 3****Description** This allows you to activate fan speed 3 on the AC unit**Values** 1 → Set fan speed 3**Type of access to the bus** Write**Datapoint identification** 1.002 (DPT\_Bool)**Object number 77: Status fan speed (speed 3)****Description** This shows whether the AC unit's fan speed is set to 3**Values** 1 → Fan is in speed 3**Type of access to the bus** Reading**Datapoint identification** 1.002 (DPT\_Bool)

- Enable use of +/- object for fan speed

Select the DPT that you want to use: DPT 1.007 (Step) or DPT 1.008 (Up/Down).

**Object number 18: Control fan speed +/-****Description** This allows you to change the AC unit's fan speed**Values** 0 → Decrease  
1 → Increase  
0 → Up  
1 → Down**Type of access to the bus** Write**Datapoint identification** 1.007 (DPT\_Step) 1.008 (DPT\_UpDown)

- Enable use of text object for fan speed

**Object number 78: Status fan speed text****Description** This shows the AC unit's fan speed**Values** ASCII String**Type of access to the bus** Reading**Datapoint identification** 16.001 (DPT\_String\_8859\_1)

## Vanes configuration

- **Enable use of vertical movement vanes**

If you select Yes, objects 19 and 79 will be enabled to control the vertical movement of the slats, and the following fields will appear:

- ◇ Enable use of 5 vanes control
- ◇ DPT object type for vertical vanes
- ◇ Enable use of bit-type vertical vanes objects
- ◇ Enable use of +/- object for vertical vanes
- ◇ Enable use of text object for vertical vanes

<b>Object number 19: Control slats U-D (5 positions)</b>											
<b>Description</b>	This allows you to change the vertical position of the AC unit's slats										
<b>Values</b>	<table border="0"> <tr> <td>0 ... 29 % → Position 1</td> <td>1 → Position 1</td> </tr> <tr> <td>30 ... 49 % → Position 2</td> <td>2 → Position 2</td> </tr> <tr> <td>50 ... 69 % → Position 3</td> <td>3 → Position 3</td> </tr> <tr> <td>70 ... 89 % → Position 4</td> <td>4 → Position 4</td> </tr> <tr> <td>90 ... 100 % → Position 5</td> <td>5 → Position 5</td> </tr> </table>	0 ... 29 % → Position 1	1 → Position 1	30 ... 49 % → Position 2	2 → Position 2	50 ... 69 % → Position 3	3 → Position 3	70 ... 89 % → Position 4	4 → Position 4	90 ... 100 % → Position 5	5 → Position 5
0 ... 29 % → Position 1	1 → Position 1										
30 ... 49 % → Position 2	2 → Position 2										
50 ... 69 % → Position 3	3 → Position 3										
70 ... 89 % → Position 4	4 → Position 4										
90 ... 100 % → Position 5	5 → Position 5										
<b>Type of access to the bus</b>	Write										
<b>Datapoint identification</b>	5.001 (DPT_Scalling) 5.010 (DPT_Enumerated)										

<b>Object number 79: Status slats U-D (5 positions)</b>											
<b>Description</b>	This shows the vertical position of the AC unit's slats										
<b>Values</b>	<table border="0"> <tr> <td>20 % → Position 1</td> <td>1 → Position 1</td> </tr> <tr> <td>40 % → Position 2</td> <td>2 → Position 2</td> </tr> <tr> <td>60 % → Position 3</td> <td>3 → Position 3</td> </tr> <tr> <td>80 % → Position 4</td> <td>4 → Position 4</td> </tr> <tr> <td>100 % → Position 5</td> <td>5 → Position 5</td> </tr> </table>	20 % → Position 1	1 → Position 1	40 % → Position 2	2 → Position 2	60 % → Position 3	3 → Position 3	80 % → Position 4	4 → Position 4	100 % → Position 5	5 → Position 5
20 % → Position 1	1 → Position 1										
40 % → Position 2	2 → Position 2										
60 % → Position 3	3 → Position 3										
80 % → Position 4	4 → Position 4										
100 % → Position 5	5 → Position 5										
<b>Type of access to the bus</b>	Reading										
<b>Datapoint identification</b>	5.001 (DPT_Scalling) 5.010 (DPT_Enumerated)										

- **Enable use of 5 vanes control**

Select the slats you want to control (5 or N). 5 slats are controlled by default (communication objects 19 and 79). If you select to control up to N slats, communication objects 19 and 79 will be replaced by 20 and 80, respectively.

<b>Object number 20: Control slats U-D (N positions)</b>																	
<b>Description</b>	This allows you to change the vertical position of the AC unit's slats																
<b>Values</b>	<table border="0"> <tr> <td>0 ... 100 % → Vane 1 to vane N</td> <td>1 → Position 1</td> </tr> <tr> <td></td> <td>2 → Position 2</td> </tr> <tr> <td></td> <td>3 → Position 3</td> </tr> <tr> <td></td> <td>4 → Position 4</td> </tr> <tr> <td></td> <td>5 → Position 5</td> </tr> <tr> <td></td> <td>6 → Position 6</td> </tr> <tr> <td></td> <td>7 → Position 7</td> </tr> <tr> <td></td> <td>8 → Position 8</td> </tr> </table>	0 ... 100 % → Vane 1 to vane N	1 → Position 1		2 → Position 2		3 → Position 3		4 → Position 4		5 → Position 5		6 → Position 6		7 → Position 7		8 → Position 8

<b>Datapoint identification</b>	5.001 (DPT_Scalling) 5.010 (DPT_Enumerated)																

- DPT object type for vertical vanes

Select whether you want to use Datapoint DPT 5.001 (percentage control (Scaling)) or DPT 5.010 (number control (Enumerated)) to control and read the status of the AC unit's slats:

5.001 (DPT_Scaling)	5.010 (DPT_Enumerated)
0 ... 29 % → Position 1	1 → Position 1
30 ... 49 % → Position 2	2 → Position 2
50 ... 69 % → Position 3	3 → Position 3
70 ... 89 % → Position 4	4 → Position 4
90 ... 100 % → Position 5	5 → Position 5

- Enable use of bit-type vertical vanes objects

<b>Object number</b>	<b>21: Control slats U-D Auto mode</b>	
<b>Description</b>	This allows you activate the auto function for the vertical movement of the AC unit's slats	
<b>Values</b>	0 → Off	1 → Auto
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.002 (DPT_Bool)	
<b>Object number</b>	<b>81: Status slats U-D Auto mode</b>	
<b>Description</b>	This shows whether the vertical movement auto function is activated for the AC unit's slats	
<b>Values</b>	0 → Off	1 → Auto
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.002 (DPT_Bool)	
<b>Object number</b>	<b>22: Control slats U-D (position 1)</b>	
<b>Description</b>	This allows you to activate vertical position 1 for the AC unit's slats	
<b>Values</b>	1 → Set position 1	
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.002 (DPT_Bool)	
<b>Object number</b>	<b>82: Status slats U-D (position 1)</b>	
<b>Description</b>	This shows whether the vertical movement of the AC unit's slats is in position 1	
<b>Values</b>	1 → Position 1	
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.002 (DPT_Bool)	
<b>Object number</b>	<b>23: Control slats U-D (position 2)</b>	
<b>Description</b>	This allows you to activate vertical position 2 for the AC unit's slats	
<b>Values</b>	1 → Set position 2	
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.002 (DPT_Bool)	
<b>Object number</b>	<b>83: Status slats U-D (position 2)</b>	
<b>Description</b>	This shows whether the vertical movement of the AC unit's slats is in position 2	
<b>Values</b>	1 → Position 2	
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.002 (DPT_Bool)	
<b>Object number</b>	<b>24: Control slats U-D (position 3)</b>	
<b>Description</b>	This allows you to activate vertical position 3 for the AC unit's slats	
<b>Values</b>	1 → Set position 3	
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.002 (DPT_Bool)	

**Object number 84: Status slats U-D (position 3)****Description** This shows whether the vertical movement of the AC unit's slats is in position 3**Values** 1 → Position 3**Type of access to the bus** Reading**Datapoint identification** 1.002 (DPT\_Bool)**Object number 25: Control slats U-D (position 4)****Description** This allows you to activate vertical position 4 for the AC unit's slats**Values** 1 → Set position 4**Type of access to the bus** Write**Datapoint identification** 1.002 (DPT\_Bool)**Object number 85: Status slats U-D (position 4)****Description** This shows whether the vertical movement of the AC unit's slats is in position 4**Values** 1 → Position 4**Type of access to the bus** Reading**Datapoint identification** 1.002 (DPT\_Bool)**Object number 26: Control slats U-D (position 5)****Description** This allows you to activate vertical position 5 for the AC unit's slats**Values** 1 → Set position 5**Type of access to the bus** Write**Datapoint identification** 1.002 (DPT\_Bool)**Object number 86: Status slats U-D (position 5)****Description** This shows whether the vertical movement of the AC unit's slats is in position 5**Values** 1 → Position 5**Type of access to the bus** Reading**Datapoint identification** 1.002 (DPT\_Bool)**Object number 27: Control slats U-D swing mode****Description** This allows you activate the swing function for the vertical movement of the AC unit's slats**Values** 0 → Off 1 → Swing**Type of access to the bus** Write**Datapoint identification** 1.002 (DPT\_Bool)**Object number 87: Status slats U-D swing mode****Description** This shows whether the vertical movement swing function is activated for the AC unit's slats**Values** 0 → Off 1 → Swing**Type of access to the bus** Reading**Datapoint identification** 1.002 (DPT\_Bool)

- Enable use of +/- object for vertical vanes

Select the DPT that you want to use: DPT 1.007 (Step) or DPT 1.008 (Up/Down).

**Object number 28: Control slats U-D +/-****Description** This allows you to control the vertical movement of the AC unit's slats**Values** 0 → Decrease 0 → Up  
1 → Increase 1 → Down**Type of access to the bus** Write**Datapoint identification** 1.007 (DPT\_Step) 1.008 (DPT\_UpDown)

- Enable use of text object for vertical vanes

<b>Object number</b>	<b>88: Status slats U-D text</b>
<b>Description</b>	This shows the vertical position of the AC unit's slats
<b>Values</b>	ASCII String
<b>Type of access to the bus</b>	Reading
<b>Datapoint identification</b>	16.001 (DPT_String_8859_1)

- **Enable use of horizontal movement vanes**

If you select Yes, objects 29 and 89 will be enabled to control the horizontal movement of the slats, and the following fields will appear:

- ◇ Enable use of 5 vanes control
- ◇ DPT object type for horizontal vanes
- ◇ Enable use of bit-type horizontal vanes objects
- ◇ Enable use of +/- object for horizontal vanes
- ◇ Enable use of text object for horizontal vanes

<b>Object number</b>	<b>29: Control slats L-R (5 positions)</b>	
<b>Description</b>	This allows you to change the horizontal position of the AC unit's slats	
<b>Values</b>	0 ... 29 % → Position 1 30 ... 49 % → Position 2 50 ... 69 % → Position 3 70 ... 89 % → Position 4 90 ... 100 % → Position 5	1 → Position 1 2 → Position 2 3 → Position 3 4 → Position 4 5 → Position 5
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	5.001 (DPT_Scalling)	5.010 (DPT_Enumerated)

<b>Object number</b>	<b>89: Status slats U-D (5 positions)</b>	
<b>Description</b>	This shows the horizontal position of the AC unit's slats	
<b>Values</b>	20 % → Position 1 40 % → Position 2 60 % → Position 3 80 % → Position 4 100 % → Position 5	1 → Position 1 2 → Position 2 3 → Position 3 4 → Position 4 5 → Position 5
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	5.001 (DPT_Scalling)	5.010 (DPT_Enumerated)

- Enable use of 5 vanes control

Select the slats you want to control (5 or N). 5 slats are controlled by default (communication objects 29 and 89). If you select to control up to N slats, communication objects 29 and 89 will be replaced by 30 and 90, respectively.

<b>Object number</b>	<b>30: Control slats L-R (N positions)</b>	
<b>Description</b>	This allows you to change the horizontal position of the AC unit's slats	
<b>Values</b>	0 ... 100 % → Vane 1 to vane N	1 → Position 1 2 → Position 2 3 → Position 3 4 → Position 4 5 → Position 5 6 → Position 6 7 → Position 7 8 → Position 8
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	5.001 (DPT_Scalling)	5.010 (DPT_Enumerated)

**Object number 90: Status slats L-R (N positions)****Description** This shows the horizontal position of the AC unit's slats**Values** 0 ... 100 % → Vane 1 to vane N

1 → Position 1  
 2 → Position 2  
 3 → Position 3  
 4 → Position 4  
 5 → Position 5  
 6 → Position 6  
 7 → Position 7  
 8 → Position 8

**Type of access to the bus** Reading**Datapoint identification** 5.001 (DPT\_Scaling)

5.010 (DPT\_Enumerated)

- DPT object type for horizontal vanes

Select whether you want to use Datapoint DPT 5.001 (percentage control (Scaling)) or DPT 5.010 (number control (Enumerated)) to control and read the status of the AC unit's slats:

**5.001 (DPT\_Scaling)****5.010 (DPT\_Enumerated)**

0 ... 29 % → Position 1  
 30 ... 49 % → Position 2  
 50 ... 69 % → Position 3  
 70 ... 89 % → Position 4  
 90 ... 100 % → Position 5

1 → Position 1  
 2 → Position 2  
 3 → Position 3  
 4 → Position 4  
 5 → Position 5

- Enable use of bit-type horizontal vanes objects

**Object number 31: Control slats L-R Auto mode****Description** This allows you activate the auto function for the horizontal movement of the AC unit's slats**Values** 0 → Off

1 → Auto

**Type of access to the bus** Write**Datapoint identification** 1.002 (DPT\_Bool)**Object number 91: Status slats L-R Auto mode****Description** This shows whether the horizontal movement auto function is activated for the AC unit's slats**Values** 0 → Off

1 → Auto

**Type of access to the bus** Reading**Datapoint identification** 1.002 (DPT\_Bool)**Object number 32: Control slats L-R (position 1)****Description** This allows you to activate horizontal position 1 for the AC unit's slats**Values** 1 → Set position 1**Type of access to the bus** Write**Datapoint identification** 1.002 (DPT\_Bool)**Object number 92: Status slats L-R (position 1)****Description** This shows whether the horizontal movement of the AC unit's slats is in position 1**Values** 1 → Position 1**Type of access to the bus** Reading**Datapoint identification** 1.002 (DPT\_Bool)**Object number 33: Control slats L-R (position 2)****Description** This allows you to activate horizontal position 2 for the AC unit's slats**Values** 1 → Set position 2**Type of access to the bus** Write**Datapoint identification** 1.002 (DPT\_Bool)

<b>Object number</b>	<b>93: Status slats L-R (position 2)</b>
<b>Description</b>	This shows whether the horizontal movement of the AC unit's slats is in position 2
<b>Values</b>	1 → Position 2
<b>Type of access to the bus</b>	Reading
<b>Datapoint identification</b>	1.002 (DPT_Bool)
<b>Object number</b>	<b>34: Control slats L-R (position 3)</b>
<b>Description</b>	This allows you to activate horizontal position 3 for the AC unit's slats
<b>Values</b>	1 → Set position 3
<b>Type of access to the bus</b>	Write
<b>Datapoint identification</b>	1.002 (DPT_Bool)
<b>Object number</b>	<b>94: Status slats L-R (position 3)</b>
<b>Description</b>	This shows whether the horizontal movement of the AC unit's slats is in position 3
<b>Values</b>	1 → Position 3
<b>Type of access to the bus</b>	Reading
<b>Datapoint identification</b>	1.002 (DPT_Bool)
<b>Object number</b>	<b>35: Control slats L-R (position 4)</b>
<b>Description</b>	This allows you to activate horizontal position 4 for the AC unit's slats
<b>Values</b>	1 → Set position 4
<b>Type of access to the bus</b>	Write
<b>Datapoint identification</b>	1.002 (DPT_Bool)
<b>Object number</b>	<b>95: Status slats L-R (position 4)</b>
<b>Description</b>	This shows whether the horizontal movement of the AC unit's slats is in position 4
<b>Values</b>	1 → Position 4
<b>Type of access to the bus</b>	Reading
<b>Datapoint identification</b>	1.002 (DPT_Bool)
<b>Object number</b>	<b>36: Control slats L-R (position 5)</b>
<b>Description</b>	This allows you to activate horizontal position 5 for the AC unit's slats
<b>Values</b>	1 → Set position 5
<b>Type of access to the bus</b>	Write
<b>Datapoint identification</b>	1.002 (DPT_Bool)
<b>Object number</b>	<b>96: Status slats L-R (position 5)</b>
<b>Description</b>	This shows whether the horizontal movement of the AC unit's slats is in position 5
<b>Values</b>	1 → Position 5
<b>Type of access to the bus</b>	Reading
<b>Datapoint identification</b>	1.002 (DPT_Bool)
<b>Object number</b>	<b>37: Control slats L-R swing mode</b>
<b>Description</b>	This allows you activate the swing function for the horizontal movement of the AC unit's slats
<b>Values</b>	0 → Off 1 → Swing
<b>Type of access to the bus</b>	Write
<b>Datapoint identification</b>	1.002 (DPT_Bool)
<b>Object number</b>	<b>97: Status slats L-R swing mode</b>
<b>Description</b>	This shows whether the horizontal movement swing function is activated for the AC unit's slats
<b>Values</b>	0 → Off 1 → Swing
<b>Type of access to the bus</b>	Reading
<b>Datapoint identification</b>	1.002 (DPT_Bool)

- Enable use of +/- object for horizontal vanes

Select the DPT that you want to use: DPT 1.007 (Step) or DPT 1.008 (Up/Down).

<b>Object number</b>	<b>38: Control slats L-R +/-</b>	
<b>Description</b>	This allows you to control the horizontal movement of the AC unit's slats	
<b>Values</b>	0 → Decrease 1 → Increase	0 → Up 1 → Down
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.007 (DPT_Step)	1.008 (DPT_UpDown)

- Enable use of text object for horizontal vanes

<b>Object number</b>	<b>98: Status slats L-R text</b>	
<b>Description</b>	This shows the horizontal position of the AC unit's slats	
<b>Values</b>	ASCII String	
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	16.001 (DPT_String_8859_1)	

## Temperature configuration

- ◆ Periodic sending of "Status\_AC Setpoint" (in seconds, 0 = no periodic sending)

Indicate how often you want the set point temperature status to be sent to the AC unit (in seconds).

- ◆ Enable use of +/- object for set point

Select the DPT that you want to use: DPT 1.007 (Step) or DPT 1.008 (Up/Down).

<b>Object number</b>	<b>40: Control set point temperature +/-</b>	
<b>Description</b>	This allows you to raise or lower the set point temperature of the AC unit in increments of 1°C/F	
<b>Values</b>	0 → Decrease 1 → Increase	0 → Up 1 → Down
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.007 (DPT_Step)	1.008 (DPT_UpDown)

- ◆ Enable limitation on control set point

Select the minimum and maximum set point temperature that can be set for the AC unit (in increments of 1 °C/°F).

<b>Object number</b>	<b>41: Control set point limit</b>	
<b>Description</b>	This allows you to enable the function to limit the AC unit's set point temperature	
<b>Values</b>	0 → Disable	1 → Enable
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.001 (DPT_Switch)	

<b>Object number</b>	<b>100: Status set point temperature limitation</b>	
<b>Description</b>	This shows whether the function to limit the AC unit's set point temperature is enabled	
<b>Values</b>	0 → Disable	1 → Enable
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.001 (DPT_Switch)	

<b>Object number</b>	<b>102: Status Auto mode set point temperature maximum limitation</b>	
<b>Description</b>	This shows the upper set point temperature limit in auto mode	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)

<b>Object number</b>	<b>103: Status Auto mode set point temperature minimum limitation</b>	
<b>Description</b>	This shows the lower set point temperature limit in auto mode	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)

<b>Object number</b>	<b>104: Status Cool mode set point temperature maximum limitation</b>	
<b>Description</b>	This shows the upper set point temperature limit in cooling mode	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)

<b>Object number</b>	<b>105: Status Cool mode set point temperature minimum limitation</b>	
<b>Description</b>	This shows the lower set point temperature limit in cooling mode	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)

<b>Object number</b>	<b>106: Status Heat mode set point temperature maximum limitation</b>	
<b>Description</b>	This shows the upper set point temperature limit in heating mode	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)

<b>Object number</b>	<b>107: Status Heat mode set point temperature minimum limitation</b>	
<b>Description</b>	This shows the lower set point temperature limit in heating mode	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)

<b>Object number</b>	<b>108: Status Dry mode set point temperature maximum limitation</b>	
<b>Description</b>	This shows the upper set point temperature limit in dry mode	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)

<b>Object number</b>	<b>109: Status Dry mode set point temperature minimum limitation</b>	
<b>Description</b>	This shows the lower set point temperature limit in dry mode	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)

<b>Object number</b>	<b>110: Status Fan mode set point temperature maximum limitation</b>	
<b>Description</b>	This shows the upper set point temperature limit in ventilation mode	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)

<b>Object number</b>	<b>111: Status Fan mode set point temperature minimum limitation</b>	
<b>Description</b>	This shows the lower set point temperature limit in ventilation mode	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)

- Ambient temperature is provided from KNX

This enables/disables room temperature reading measurement from a KNX device (master).

<b>Object number</b>	<b>42: Control ambient temperature</b>	
<b>Description</b>	This allows the room temperature measured by a KNX device to be sent to the AC unit	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)

<b>Object number</b>	<b>101: Status ambient temperature</b>	
<b>Description</b>	This shows the room temperature measured by a KNX device	
<b>Values</b>	°C	°F
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	9.001 (DPT_Value_Temp)	9.027 (DPT_Value_Temp_F)

## Timeouts configuration

- Enable use of open window. If you select Yes, objects 388 and 416 will be enabled.
  - ◊ AC Off timeout (hh:mm:ss). Select the time after which the AC unit will turn off after detecting that the window is open.
  - ◊ Action on closing window.
    - » Do not reload the last On/Off status. The AC unit keep off when it detects that the window has been closed.
    - » Reload the last On/Off status. Upon detecting that the window has been closed, the AC unit will return to its status from before the window was opened.
  - ◊ AC On timeout (hh:mm:ss). The “Action on closing window” parameter must be set to “Reload the last On/Off status”. Select the time after which the AC unit will turn on after detecting that the window is closed.
  - ◊ Allow On/Off when window contact is active.
    - » No. This does not allow the AC unit to be turned on while the window is open.
    - » Yes. This allows you to change the AC unit’s status while the window is open.

### Object number 388: Control window contact

<b>Description</b>	This allows you to enable the use of the window contact	
<b>Values</b>	0 → Open	1 → Closed
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.009 (DPT_OpenClose)	

### Object number 416: Status window contact

<b>Description</b>	This shows the window contact’s status	
<b>Values</b>	0 → Open	1 → Closed
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.009 (DPT_OpenClose)	

- Enable use of timer function to switch off the unit. If you select Yes, objects 389 and 417 will be enabled.
  - ◊ AC switch-off timeout (hh:mm:ss). Select the time after which the AC unit will turn off after detecting that this function has been activated.
  - ◊ Allow On/Off operation when timeout is elapsed.
    - » No. This does not allow the AC unit to be turned on while the function is activated.
    - » Yes. This allows you to change the AC unit’s status while the function is activated.

### Object number 389: Control switch Off timeout

<b>Description</b>	This allows you to activate a timer to switch off the indoor unit	
<b>Values</b>	0 → Stop	1 → Start
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.010 (DPT_Start)	

### Object number 417: Status switch Off timeout

<b>Description</b>	This shows whether the timer has been activated	
<b>Values</b>	0 → Stop	1 → Start
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.010 (DPT_Start)	

- Enable use of unoccupied timer function. If you select Yes, objects 390 and 418 will be enabled.
  - ◇ Timeout to apply actions (hh:mm:ss). Select the time after which the AC unit will turn off after detecting that the room is unoccupied.
  - ◇ Action after timeout elapsed.
    - » Switch off. The AC unit is switched off after the timeout has elapsed.
    - » Unoccupied mode. The AC unit switches to unoccupied mode after the timeout has elapsed.
  - ◇ Timeout for unoccupied mode activation (hh:mm:ss). The "Action after timeout elapsed" parameter must be set to "Unoccupied mode". If the AC unit enters unoccupied mode, a timeout is started to decrease (if in heating mode) / increase (if in cooling/ventilation mode) the temperature by 1 °C/°F. This action is carried out 3 times, after which the unit is switched off.
  - ◇ Allow On/Off operation when not occupied.
    - » No. This does not allow the AC unit to be turned on while the room is unoccupied.
    - » Yes. This allows you to change the AC unit's status while the room is unoccupied.

**Object number 390: Control occupancy sensor**

<b>Description</b>	This allows you to activate the unoccupied function in order to switch the indoor unit to unoccupied mode	
<b>Values</b>	0 → Not occupied	1 → Occupied
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.018 (DPT_Occupancy)	

**Object number 418: Status occupancy sensor**

<b>Description</b>	This shows whether the unoccupied function has been activated	
<b>Values</b>	0 → Not occupied	1 → Occupied
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.018 (DPT_Occupancy)	

- Enable use of Sleep function. If you select Yes, objects 391 and 419 will be enabled.

- ◇ Sleep function switch-off timeout (hh:mm:ss). Select the time after which the AC unit will turn off after detecting that this function has been activated.

**Object number 391: Control Sleep timeout**

<b>Description</b>	This allows you to activate a timer to switch off the indoor unit	
<b>Values</b>	0 → Stop	1 → Start
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.010 (DPT_Start)	

**Object number 419: Status Sleep timeout**

<b>Description</b>	This shows whether the timer has been activated	
<b>Values</b>	0 → Stop	1 → Start
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	1.010 (DPT_Start)	

## Scenes configuration

- Enable use of scenes

If you select Yes, objects 392 and 420 will be enabled, and the following fields will appear:

- ◇ Enable use of bit objects for saving scenes
- ◇ Enable use of bit objects for scene execution
- ◇ Enable fan speed control by percentage
- ◇ Enable vanes control by percentage

<b>Object number</b>	<b>392: Control save/execute scene</b>	
<b>Description</b>	This allows you to save or execute scenes. Changing the value of the object will also change the function and scene number	
<b>Values</b>	(0)0 to (0)63* → Execute scene ID	(1)28 to (1)91* → Save scene ID
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	18.001 (DPT_SceneControl)	

\*(0) and (1) are the default values set in ETS to execute or save scenes, respectively. Therefore, you only need to enter the values that follow the brackets, i.e., to execute scenes you must select a value between 0 and 63, to save scenes enter a value between 28 and 91.

<b>Object number</b>	<b>420: Status current scene</b>	
<b>Description</b>	This shows the current scene being executed	
<b>Values</b>	0 to 63 → Scene ID	
<b>Type of access to the bus</b>	Reading	
<b>Datapoint identification</b>	17.001 (DPT_SceneNumber)	

- Enable use of bit objects for saving scenes

<b>Object number</b>	<b>393: Control save scene 1</b>	
<b>Description</b>	This saves the indoor unit's settings as scene 1	
<b>Values</b>	1 → Save scene 1	
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.002 (DPT_Bool)	

<b>Object number</b>	<b>394: Control save scene 2</b>	
<b>Description</b>	This saves the indoor unit's settings as scene 2	
<b>Values</b>	1 → Save scene 2	
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.002 (DPT_Bool)	

<b>Object number</b>	<b>395: Control save scene 3</b>	
<b>Description</b>	This saves the indoor unit's settings as scene 3	
<b>Values</b>	1 → Save scene 3	
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.002 (DPT_Bool)	

<b>Object number</b>	<b>396: Control save scene 4</b>	
<b>Description</b>	This saves the indoor unit's settings as scene 4	
<b>Values</b>	1 → Save scene 4	
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.002 (DPT_Bool)	

<b>Object number</b>	<b>397: Control save scene 5</b>	
<b>Description</b>	This saves the indoor unit's settings as scene 5	
<b>Values</b>	1 → Save scene 5	
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.002 (DPT_Bool)	

**Object number 398: Control save scene 6****Description** This saves the indoor unit's settings as scene 6**Values** 1 → Save scene 6**Type of access to the bus** Write**Datapoint identification** 1.002 (DPT\_Bool)**Object number 399: Control save scene 7****Description** This saves the indoor unit's settings as scene 7**Values** 1 → Save scene 7**Type of access to the bus** Write**Datapoint identification** 1.002 (DPT\_Bool)**Object number 400: Control save scene 8****Description** This saves the indoor unit's settings as scene 8**Values** 1 → Save scene 8**Type of access to the bus** Write**Datapoint identification** 1.002 (DPT\_Bool)**Object number 401: Control save scene 9****Description** This saves the indoor unit's settings as scene 9**Values** 1 → Save scene 9**Type of access to the bus** Write**Datapoint identification** 1.002 (DPT\_Bool)**Object number 402: Control save scene 10****Description** This saves the indoor unit's settings as scene 10**Values** 1 → Save scene 10**Type of access to the bus** Write**Datapoint identification** 1.002 (DPT\_Bool)

- Enable use of bit objects for scene execution

**Object number 403: Control execute scene 1****Description** This executes scene 1**Values** 1 → Execute scene 1**Type of access to the bus** Write**Datapoint identification** 1.002 (DPT\_Bool)**Object number 404: Control execute scene 2****Description** This executes scene 2**Values** 1 → Execute scene 2**Type of access to the bus** Write**Datapoint identification** 1.002 (DPT\_Bool)**Object number 405: Control execute scene 3****Description** This executes scene 3**Values** 1 → Execute scene 3**Type of access to the bus** Write**Datapoint identification** 1.002 (DPT\_Bool)**Object number 406: Control execute scene 4****Description** This executes scene 4**Values** 1 → Execute scene 4**Type of access to the bus** Write**Datapoint identification** 1.002 (DPT\_Bool)

<b>Object number</b>	<b>407: Control execute scene 5</b>
<b>Description</b>	This executes scene 5
<b>Values</b>	1→ Execute scene 5
<b>Type of access to the bus</b>	Write
<b>Datapoint identification</b>	1.002 (DPT_Bool)
<b>Object number</b>	<b>408: Control execute scene 6</b>
<b>Description</b>	This executes scene 6
<b>Values</b>	1→ Execute scene 6
<b>Type of access to the bus</b>	Write
<b>Datapoint identification</b>	1.002 (DPT_Bool)
<b>Object number</b>	<b>409: Control execute scene 7</b>
<b>Description</b>	This executes scene 7
<b>Values</b>	1→ Execute scene 7
<b>Type of access to the bus</b>	Write
<b>Datapoint identification</b>	1.002 (DPT_Bool)
<b>Object number</b>	<b>410: Control execute scene 8</b>
<b>Description</b>	This executes scene 8
<b>Values</b>	1→ Execute scene 8
<b>Type of access to the bus</b>	Write
<b>Datapoint identification</b>	1.002 (DPT_Bool)
<b>Object number</b>	<b>411: Control execute scene 9</b>
<b>Description</b>	This executes scene 9
<b>Values</b>	1→ Execute scene 9
<b>Type of access to the bus</b>	Write
<b>Datapoint identification</b>	1.002 (DPT_Bool)
<b>Object number</b>	<b>412: Control execute scene 10</b>
<b>Description</b>	This executes scene 10
<b>Values</b>	1→ Execute scene 10
<b>Type of access to the bus</b>	Write
<b>Datapoint identification</b>	1.002 (DPT_Bool)

- Scene 1 ... 10

Select the scene ID (values available from 0 to 63). If you wish to configure each scene from ETS, activate the "Scene preset" parameter and set the desired parameter values according to the "Scene selection" being configured.

- ◇ On-Off: Select if you want to switch the AC unit on/off, or if you do not want to carry out any action.
- ◇ Mode: Select if you want to change the AC unit's operation mode, or if you do not want to carry out any action.
- ◇ Fan speed: Select if you want to change the AC unit's fan speed, or if you do not want to carry out any action.
- ◇ Vanes U-D: Select if you want to change the vertical position of the AC unit's slats, or if you do not want to carry out any action.
- ◇ Vanes L-R: Select if you want to change the horizontal position of the AC unit's slats, or if you do not want to carry out any action.
- ◇ Set point: Select if you want to change the set point temperature of the AC unit, or if you do not want to carry out any action.

## Inputs configuration

Enable the use of the Aidoo KNX inputs:

- Enable use of input 1: communication object 421.
- Enable use of input 2: communication object 423.
- Enable use of input 3: communication object 425.

The objects will behave differently depending on the configuration of each input.

Parameters available for configuring each input:

- ◇ Disabling function. Select whether or not you want to enable the object that allows the input to be disabled if necessary (communication objects 413, 414 and 415). If yes, select whether you want to use Datapoint DPT 1.002 (0 = False) or DPT 1.003 (0 = Disable).
  - ◇ Contact type. Sets the contact logic as "Normally open" or "Normally closed".
  - ◇ Debounce time. Select the debounce time (in milliseconds) required for the system to recognize there has been a change in the contact.
  - ◇ Function. Select the input function.
- Disabling function

<b>Object number</b>	<b>413: Control disable input 1</b>	
<b>Description</b>	This allows the use of input 1 to be disabled	
<b>Values</b>	0 → False 1 → True	0 → Disable 1 → Enable
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.002 (DPT_Bool)	1.003 (DPT_Enable)
<b>Object number</b>	<b>414: Control disable input 2</b>	
<b>Description</b>	This allows the use of input 2 to be disabled	
<b>Values</b>	0 → False 1 → True	0 → Disable 1 → Enable
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.002 (DPT_Bool)	1.003 (DPT_Enable)
<b>Object number</b>	<b>415: Control disable input 3</b>	
<b>Description</b>	This allows the use of input 3 to be disabled	
<b>Values</b>	0 → False 1 → True	0 → Disable 1 → Enable
<b>Type of access to the bus</b>	Write	
<b>Datapoint identification</b>	1.002 (DPT_Bool)	1.003 (DPT_Enable)

- Function

- ◇ Switching

- » Send telegram after bus recovery. Select the action to be performed on this digital input after bus recovery (e.g., after a power failure): no action, on, off or current status.
  - > Sending delay after bus recovery. If an action is selected, indicate the time delay for sending the telegram (in seconds).
- » Value on raising edge (contact activated). Select the action to be sent to the associated communication object, if it produces a rising edge (activated input): no action, on, off or toggle.
- » Value on falling edge (contact deactivated). Select the action to be sent to the associated communication object, if it produces a falling edge (deactivated input): no action, on, off or toggle.
- » Cyclical sending. Select if you want cyclical sending to occur depending on the status of the digital input: never, always, when output value is "Off" or When output value is "On".
  - > Period for cyclical sending. If cyclical sending is selected, indicate the time period (in seconds) for this cycle.

#### ◆ Dimming

- » Send telegram after bus recovery. Select the action to be performed on this digital input after bus recovery (e.g., after a power failure): no action, on, off.
  - > Sending delay after bus recovery. If an action is selected, indicate the time delay for sending the telegram (in seconds).
- » Mode for short/long operation. Select the action for a short operation to be sent on a falling edge (deactivated input): off (decrease), on (increase) or toggle. A press and hold will result in either an increasing step or a decreasing step.
  - > Increasing step. Select the percentage of the increasing step that will be sent for a long operation.
  - > Decreasing step. Select the percentage of the decreasing step that will be sent for a long operation.
  - > Short/long operation limit. Defines the time that must elapse for the object to interpret that a long operation has occurred (in milliseconds).
  - > Cyclical sending period in long operation (0 – no cyclical sending). Defines the time (in milliseconds) during which the long operation must be executed.

#### ◆ Shutter/Blind

- » Send telegram after bus recovery. Select the action to be performed on this digital input after bus recovery (e.g., after a power failure): no action, move up or move down.
  - > Sending delay after bus recovery. If an action is selected, indicate the time delay for sending the telegram (in seconds).
- » Operation. Select the action to be sent on a rising edge (activated input): up, down or toggle.
- » Method. Select the operating method for the shutter/blind: Step-Move-Step or Move-Step.
  - > Step-Move-Step. On a rising edge (activated input), a step telegram will be sent and counter 1 will start (Short/long operation limit).  
**Note:** No action will be taken if a falling edge (deactivated input) occurs during this time.  
If the rising edge is maintained for longer than the time defined in counter 1, a move telegram will be sent and counter 2 will start (Vanes adjustment time). If a falling edge (deactivated input) occurs during the time specified in this second counter, a step telegram will be sent.  
**Note:** No action will be taken if a falling edge (deactivated input) occurs after this time.
  - > Move-Step. On a rising edge (activated input), a move telegram will be sent and counter 2 will start (Vanes adjustment time). If a falling edge (deactivated input) occurs during this time, a stop telegram will be sent.  
**Note:** No action will be taken if a falling edge (deactivated input) occurs after this time.
- » Short/long operation limit (counter 1). Defines the time that must elapse between a short operation and a long operation (in milliseconds).
- » Vanes adjustment time (counter 2). Defines the time that must elapse before adjusting the slats or moving the shutter/blind (in milliseconds).

#### ◆ Value

- » Send telegram after bus recovery. Select if you want to send an action (fixed value) on this digital input after bus recovery (e.g., after a power failure) or if you do not want to send any action.
  - > Sending delay after bus recovery. If an action is selected, indicate the time delay for sending this telegram (in seconds).
- » DPT to be sent. Select the type of DPT to be sent on activating the input:
  - > DPT 5.010 (1 byte unsigned value). Values: 0 ... 255
  - > DPT 7.001 (2 byte unsigned value). Values: 0 ... 65535
  - > DPT 8.001 (2 byte signed value). Values: -32767 ... 32767
  - > DPT 9.001 (temperature). Values: Temperature (°C)
  - > DPT 12.001 (4 byte unsigned value). Values: 0 ... 4294967295
- » Value on raising edge (when contact activated). Defines the value to be sent when the contact is activated.

#### ◆ Scene (internal)

- » Scene when contact is activated. Select the scene that will be executed when the digital input is activated.

#### ◆ Occupancy (internal). Switches to occupied mode when the digital input is activated.

#### ◆ Window (internal). Activates the window contact timer when this digital input is activated.

- Input 1

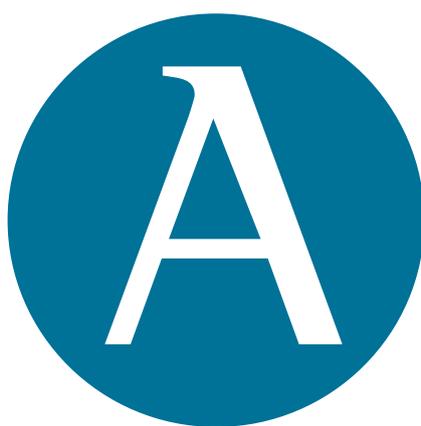

<b>421: Status 1</b>			
<b>Object number</b>	Switching	Dimming On/Off	Blind step
<b>Description</b>	Shows the status of input 1		
<b>Values</b>	0 → Off 1 → On	0 → Off 1 → On	0 → Step up 1 → Step down
<b>Type of access to the bus</b>	Reading		
<b>Datapoint identification</b>	1.001 (DPT_Switch)	1.001 (DPT_Switch)	1.008 (DPT_UpDown)
<b>422: Status 1</b>			
<b>Object number</b>	Value	Dimming step	Blind move
<b>Description</b>	Shows the value generated according to the behavior defined for the input		
<b>Values</b>	1 byte unsigned value 2 byte unsigned value 2 byte signed value Temperature (°C) 4 byte unsigned value	Dimming step	0 → Up 1 → Down
<b>Type of access to the bus</b>	Reading		
<b>Datapoint identification</b>	5.010 (DPT_Value_1_Ucount) 7.001 (DPT_Value_2_Ucount) 8.001 (DPT_Value_2_Count) 9.001 (DPT_Value_Temp) 12.001 (DPT_Value_4_Ucount)	3.007 (DPT_Control_Dimm.)	1.008 (DPT_UpDown)

- Input 2

<b>423: Status 2</b>			
<b>Object number</b>	Switching	Dimming On/Off	Blind Step
<b>Description</b>	Shows the status of input 2		
<b>Values</b>	0 → Off 1 → On	0 → Off 1 → On	0 → Step up 1 → Step down
<b>Type of access to the bus</b>	Reading		
<b>Datapoint identification</b>	1.001 (DPT_Switch)	1.001 (DPT_Switch)	1.008 (DPT_UpDown)
<b>424: Status 2</b>			
<b>Object number</b>	Value	Dimming step	Blind move
<b>Description</b>	Shows the value generated according to the behavior defined for the input		
<b>Values</b>	1 byte unsigned value 2 byte unsigned value 2 byte signed value Temperature (°C) 4 byte unsigned value	Dimming step	0 → Up 1 → Down
<b>Type of access to the bus</b>	Reading		
<b>Datapoint identification</b>	5.010 (DPT_Value_1_Ucount) 7.001 (DPT_Value_2_Ucount) 8.001 (DPT_Value_2_Count) 9.001 (DPT_Value_Temp) 12.001 (DPT_Value_4_Ucount)	3.007 (DPT_Control_Dimm.)	1.008 (DPT_UpDown)

- Input 3

<b>425: Status 3</b>			
<b>Object number</b>	Switching	Dimming On/Off	Blind Step
<b>Description</b>	Shows the status of input 3		
<b>Values</b>	0 → Off 1 → On	0 → Off 1 → On	0 → Step up 1 → Step down
<b>Type of access to the bus</b>	Reading		
<b>Datapoint identification</b>	1.001 (DPT_Switch)	1.001 (DPT_Switch)	1.008 (DPT_UpDown)
<b>426: Status 3</b>			
<b>Object number</b>	Value	Dimming step	Blind move
<b>Description</b>	Shows the value generated according to the behavior defined for the input		
<b>Values</b>	1 byte unsigned value 2 byte unsigned value 2 byte signed value Temperature (°C) 4 byte unsigned value	Dimming step	0 → Up 1 → Down
<b>Type of access to the bus</b>	Reading		
<b>Datapoint identification</b>	5.010 (DPT_Value_1_Ucount) 7.001 (DPT_Value_2_Ucount) 8.001 (DPT_Value_2_Count) 9.001 (DPT_Value_Temp) 12.001 (DPT_Value_4_Ucount)	3.007 (DPT_Control_Dimm.)	1.008 (DPT_UpDown)
